1. Introduction

Thank you for your purchase of the Ambient Weather WS-1173A Advanced Weather Station with Temperature, Humidity, Barometer, Advanced Forecasting, Sunrise, Sunset, and Moon Phase. The following user guide provides step by step instructions for installation, operation and troubleshooting. To download the latest full sized manual and additional troubleshooting tips, please visit:

http://ambientweather.wikispaces.com/ws1173

2. Getting Started

Note: The power up sequence must be performed in the order shown in this section (remote transmitter first, Display Console second).

The WS-1173 weather station consists of a display console (receiver), and a thermo-hygrometer (remote transmitter).

2.1 Parts List

QTY	Item		
1	Display Console		
	Frame Dimensions (LxWxH): 7.25 x 4 x 1.25 in		
	LCD Dimensions (LxW): 4.25 x 2.50"		
1	Thermo-hygrometer transmitter (WH-2) with mounting bracket		
	Dimensions (LxWxH): 3.5" x 2.5" x 0.9"		

2.2 Recommend Tools

- Philips precision screwdriver
- Drill for mounting bracket

2.3 Thermo-Hygrometer Sensor Set Up

Note: To avoid permanent damage, please take note of the battery polarity before inserting the batteries.

Remove the battery door on the back of the sensor with a Philips screwdriver (there is only one screw, at the bottom of the unit). Insert two AAA batteries as shown in Figure 1 (we recommend lithium batteries for cold weather climates, but alkaline batteries are sufficient for most climates).

Replace the battery door and set screw. Note that the temperature and humidity will be displayed on the LCD display. Looking at the back of the unit from left to right, the polarity is (-) (+) for the top battery and (+) (-) for the bottom battery.

Figure 1

2.4 Display Console Set Up

Note: To avoid permanent damage, please take note of the battery polarity before inserting the batteries.

Place the remote thermo-hygrometer about 5 to 10' away from the display console (if the sensor is too close, it may not be received by the display console).

Remove the battery door on the back of the display. Insert three AA (alkaline or lithium, avoid rechargeable) batteries in the back of the display console. Looking at the back of the unit (left to right), the polarity is (+) (-) for the top battery, (-) (+) for the middle battery and (+) (-) for the bottom battery.

The display will beep once and all of the LCD segments will light up for a few seconds to verify all segments are operating properly.

Replace the battery door, and fold out the desk stand and place the console in the upright position.

The console will instantly display indoor temperature, humidity, barometer, tendency, date and time. The remote search icon will turn on in the OUT section of the display \mathcal{U} . The outdoor temperature and humidity will update on the display within a few minutes.

Do not touch any buttons until the remote sensor reports in, otherwise the remote sensor search mode will be terminated and the search icon will turn off. When the remote sensor data has been received, the console will automatically switch to the normal mode, and all further settings can be performed.

If the remote does not update, please reference the troubleshooting guide in Section 7.

2.4.1 Radio Controlled Clock (RCC)

The RCC is received by the main console. After the remote sensor is powered up, the sensor will transmit weather data for 30 seconds, and then the sensor will begin radio controlled clock (RCC) reception and the RCC search icon $\widehat{\mathbf{N}}$ will turn on. During the RCC time reception period (maximum 10 minutes), no weather data will be transmitted to avoid interference.

If the signal reception is not successful within 1 minute, the signal search will be cancelled, the outdoor temperature and humidity will update as normal, the RCC icon will turn off, and the RCC

search will automatically resume every two hours until the signal is successfully captured. The regular RF link will resume once RCC reception routine is finished. In some locations, RCC reception may take a couple of days to receive the signal. The temperature and humidity data will continue to transmit during this period.

Once the radio controlled time is received the **WWVB** icon will be present above the time (reference Figure 2).

Note: The RCC search icon *w* is normally off and will momentarily flash when updated. The signal is passed from the outdoor sensor to the console, and will not update if the outdoor sensor is not updating properly.

2.4.2 Display Console Layout

Note: The following illustration shows the full segments of the LCD for description purposes only and will not appear like this during normal operation.

Figure 2

- 1. Weather forecast icon
- 2. low battery indicator
- 3. MIN/MAX information
- 4. Sunrise time

- 18. Outdoor humidity display
- 19. Outdoor humidity low/high alarm
- 20. Absolute or relative air pressure selection
- 21. Barometer air pressure

- 5. Moon phase indicator
- 6. Sunset time
- 7. Indoor temperature low / high alarm
- 8. Indoor temperature display
- 9. Temperature display unit
- 10. Indoor humidity display
- 11. Indoor temperature and humidity alarm on indicator
- 12. Indoor humidity low / high alarm
- 13. Dew point temperature display
- 14. Outdoor temperature low/high alarm

- 16. Temperature display unit
- 17. Outdoor temperature display

- 22. Pressure with 24 hour history graph
- 23. Pressure high alarm
- 24. Pressure alarm on indicator
- 25. Pressure low alarm
- 26. Pressure display unit (inHg or hPa)
- 27. DST (daylight savings time), WWVB indicator (radio controlled or atomic time received from Colorado), or DCF (Europe only)
- 28. Radio Controlled Time icon (flashes when updated)
- 29. Time
- 30. Second
- 31. Day of week/ time zone
- 32. Alarm on indicator
- 33. Date (M / D / Y)

2.5 Sensor Operation Verification

Verify the indoor and outdoor humidity match closely with the console and sensor array in the same location (about 5-10' apart). The sensors should be within 10% (the accuracy is \pm 5%). Allow about 30 minutes for both sensors to stabilize. For improved accuracy, please visit **Section 4.2.2 Setting Calibrated Humidity.**

Verify the indoor and outdoor temperature match closely with the console and sensor array in the same location (about 10' apart). The sensors should be within 4°F (the accuracy is \pm 2°F). Allow about 30 minutes for both sensors to stabilize. For improved accuracy, please visit **Section 4.2.3 Setting Calibrated Temperature.**

3. Remote Sensor Installation

3.1 Sensor Placement

It is recommended you mount the remote sensor on a north facing wall, in a shaded area, at a height at or above the receiver. Direct sunlight and radiant heat sources will result in inaccurate temperature readings. Although the sensor is weatherproof, it is best to mount in a well protected area, such as an eve.

Use 3 screws (included) to affix the mounting bracket to the wall with a precision screwdriver. Connect the remote sensor to the wall bracket. It is recommended to drill pilot holes first.

Figure 3

ambient weather

Note: Make sure the sensor is mounted vertically and not lying down on a flat surface. This will insure optimum reception.

3.2 Wireless Reception Considerations

Wireless signals are impacted by distance, interference (other weather stations, wireless phones, wireless routers, TVs and computer monitors), and transmission barriers, such as walls. In general, wireless signals will not penetrate solid metal and earth (down a hill, for example).

The following is a table of reception loss vs. the transmission medium. Each "wall" or obstruction decreases the transmission range by the factor shown below.

Medium	RF Signal Strength Reduction
Glass (untreated)	5-15%
Plastics	10-15%
Wood	10-40%
Brick	10-40%
Concrete	40-80%
Metal	90-100%

4. Console Operation

Note: The console has four keys for easy operation: **SET** key, **ALARM** key, **MIN/MAX** key and key. There are four program modes: Quick Display Mode, Set Mode, Alarm Mode and Min/Max Mode.

Any program mode can be exited at any time by either pressing the **SNOOZE/LIGHT** key, or waiting for the 10-second time-out to take effect (the snooze/light key is on the top of the unit and is labeled SNOOZE/LIGHT).

4.1 Quick Display Mode

A quick reference guide for the Quick Set Mode is available in Section 12.1.

While in Normal Mode, press the **SET** key (do not hold) to enter the Quick Display Mode as follows (once for outdoor temperature and dew point and twice for absolute pressure and relative pressure):

- 1. **Display Outdoor Temperature and Dew Point**. Press the **MIN/MAX** or + key to toggle between outdoor temperature and dew point.
- 2. Absolute Pressure and Relative Pressure. Press the MIN/MAX or key to toggle between absolute pressure and relative pressure.

4.2 Set (Program) Mode

A quick reference guide for the Set Mode is available in Section 12.

While in Normal Mode, press and hold the **SET** key for at least three seconds (until it beeps) to enter the Set Mode. The first setting will begin flashing. You can press the **SET** key again to advance to the next step, as defined below.

Note: In the Set mode, press the + key or MIN/MAX key to change or scroll the value. Hold

the + key or MIN/MAX key for 3 seconds to increase/decrease rapidly.

Note: Press the **SNOOZE** key (or wait 30 seconds for timeout), and the Set Mode will return to Normal Mode.

1. **Daylight Savings Time (DST)**. The **DST** (ON or OFF) setting will begin flashing. Press the key to toggle between DST ON and DST OFF.

Note: The DST should always be **ON** unless you live in Arizona or Hawaii, which do not observe DST. If you turn this feature ON, it will automatically adjust time after daylight savings and standard time changes. 1

2. **Time Zone Settings**. Press the **SET** key again to adjust the Time Zone (TZ) setting.

Press the H key or **MIN/MAX** key to adjust the time zone from -12 to 12, based on the number of hours from Coordinated Universal Time, or Greenwich Mean Time (GMT).

The following table provides times zones throughout the world. Locations in the eastern hemisphere are positive, and locations in the western hemisphere are negative.

Hours from	Time Zone	Cities
GMT		
-12	IDLW: International Date Line West	
-11	NT: Nome	Nome, AK
-10	AHST: Alaska-Hawaii Standard	Honolulu, HI
	CAT: Central Alaska	
	HST: Hawaii Standard	
-9	YST: Yukon Standard	Yukon Territory
-8	PST: Pacific Standard	Los Angeles, CA, USA
-7	MST: Mountain Standard	Denver, CO, USA
-6	CST: Central Standard	Chicago, IL, USA
-5	EST: Eastern Standard	New York, NY, USA
-4	AST: Atlantic Standard	Caracas
-3		São Paulo, Brazil
-2	AT: Azores	Azores, Cape Verde Islands
-1	WAT: West Africa	
0	GMT: Greenwich Mean	London, England
	WET: Western European	
1	CET: Central European	Paris, France
2	EET: Eastern European	Athens, Greece
3	BT: Baghdad	Moscow, Russia
4		Abu Dhabi, UAE
5		Tashkent
6		Astana
7		Bangkok
8	CCT: China Coast	Bejing
9	JST: Japan Standard	Tokyo
10	GST: Guam Standard	Sydney
11		Magadan
12	IDLE: International Date Line East	Wellington, New Zealand
	NZST: New Zealand Standard	

- 3. **12/24 Hour Format**. Press the **SET** key again to adjust the 12/24 hour format setting. Press the $\frac{1}{2}$ key to change between 12 hour and 24 hour format.
- 4. Latitude Location. Press the SET key again to adjust the Northern and Southern Hemisphere settings. The icon LA (latitude) will appear in the Time and Date field. Press the key to change between NTH (northern hemisphere) and STH (southern hemisphere).

Next, press the **ALARM** key to adjust the latitude whole number. Press the + key or **MIN/MAX** key to adjust the latitude whole number up or down.

Press the ALARM key again to adjust the latitude decimal number. Press the + key or

ambient weather

MIN/MAX key to adjust the latitude decimal number up or down.

Note: North America is located in the northern hemisphere. Therefore, there is no need to change this setting for the United States and Canada.

Note: To determine your latitude and longitude, we recommend visiting:

http://www.bing.com/maps/

and enter your street address. For more detailed information on determining and entering longitude and latitude, reference section 4.5.8.

5. Longitude Location. Press the SET key again to adjust the Eastern and Western Hemisphere settings. The icon LO (longitude) will appear in the Time and Date field. Press the key to change between EST (eastern hemisphere) and WST (western hemisphere).

Next, press the **ALARM** key to adjust the longitude whole number x 100. Press the + key or **MIN/MAX** key to adjust the longitude whole number x 100 up or down.

Press the **ALARM** key again to adjust the longitude decimal number. Press the + key or **MIN/MAX** key to adjust the longitude decimal number up or down.

Note: North America is located in the western hemisphere. Therefore, there is no need to change this setting for the United States and Canada.

- 6. Change Hour. Press the SET key again to set the hour. Press the key or MIN/MAX key to adjust the hour up or down.
- 7. Change Minute. Press the SET key again to set the minute. Press the key or MIN/MAX key to adjust the minute.
- 8. Change Year. Press the SET key again to set the calendar year. Press the + key or MIN/MAX key to adjust the calendar year.
- 9. Change Month. Press the SET key again to set the calendar month. Press the key or MIN/MAX key to adjust the calendar month.
- 10. Change Day. Press the SET key again to set the calendar day. Press the key or MIN/MAX key to adjust the calendar day (note that the display format is Month/Day/Year).
- 11. **Temperature Units** (Celsius or Fahrenheit). Press the **SET** key again to toggle the temperature units from Celsius to Fahrenheit.
- 12. Indoor Temperature Calibration (default is measured indoor temperature). Press the SET key to adjust the indoor temperature. Press the + key or MIN/MAX key to adjust the temperature up or down in 0.1 degC (0.18 degF) increments.

To view the uncalibrated value, press the ALARM key while the temperature is flashing.

Reference Section 4.2.3 Setting Calibrated Temperature for more details on this function.

13. Indoor Humidity Calibration (default is measured indoor humidity). Press the SET key to adjust the indoor humidity. Press the 🕂 key or MIN/MAX key to adjust the humidity up or down in 1% increments.

Reference Section **4.2.2 Setting Calibrated Humidity** for more details on this feature.

14. **Outdoor Temperature Calibration** (default is measured outdoor temperature). Press the **SET** key to adjust the outdoor temperature. Press the key or **MIN/MAX** key to adjust the temperature up or down in 0.1 degC (0.18 degF) increments.

To view the uncalibrated value, press the ALARM key while the temperature is flashing.

Reference Section 4.2.3 Setting Calibrated Temperature for more details on this feature.

15. **Outdoor Humidity Calibration** (default is measured outdoor humidity). Press the **SET** key to adjust the outdoor humidity. Press the Hey or **MIN/MAX** key to adjust the humidity up or down in 1% increments.

To view the uncalibrated value, press the ALARM key while the humidity is flashing.

Reference Section 4.2.2 Setting Calibrated Humidity for more details on this feature.

- 16. **Barometric Pressure Display Units** (hPa or inHg). Press the **SET** key again to toggle the pressure units between hPa or inHg.
- 17. Relative Pressure Calibration (default is 29.92 inHg). Press the SET key to adjust the relative barometric pressure. Press the + key or MIN/MAX key to adjust the relative barometric pressure up or down. Reference Section 4.2.1 Setting Barometric Pressure for more details on this function.
- 18. **Pressure Threshold Setting** (default level 2). Press the **SET** key again to adjust the pressure threshold setting. Press the key or **MIN/MAX** key to adjust the pressure threshold up or down. Reference **Section 4.5.5** for more details on this function.

4.2.1 Setting Barometric Pressure

The display console displays two different pressures: absolute (measured) and relative (corrected to sea-level).

To compare pressure conditions from one location to another, meteorologists correct pressure to sea-level conditions. Because the air pressure decreases as you rise in altitude, the sea-level corrected pressure (the pressure your location would be at if located at sea-level) is generally higher than your measured pressure.

Thus, your absolute pressure may read 28.62 inHg (969 mb) at an altitude of 1000 feet (305 m), but the relative pressure is 30.00 inHg (1016 mb).

The standard sea-level pressure is 29.92 in Hg (1013 mb). This is the average sea-level pressure

around the world. Relative pressure measurements greater than 29.92 inHg (1013 mb) are considered high pressure and relative pressure measurements less than 29.92 inHg are considered low pressure.

To determine the relative pressure for your location, locate an official reporting station near you (the internet is the best source for real time barometer conditions, such as Weather.com or Wunderground.com), and set your weather station to match the official reporting station.

Reference Section 4.2 Set (Program) Mode on how to program this feature.

4.2.2 Setting Calibrated Humidity

The display console allows you to calibrate both the indoor and outdoor humidity. Humidity is a difficult parameter to measure accurately and drifts over time. The calibration feature allows you to zero out this error. To calibrate humidity, you will need an accurate source, such as a sling psychrometer or Humidipaks One Step Calibration kit, available from Ambient Weather, which uses a salt bath.

To calibrate the indoor or outdoor humidity, in the Set Mode with the indoor or outdoor humidity flashing, press the + key or **MIN/MAX** key to increase or decrease the indoor or outdoor humidity setting (in increments of 1%) to match the calibrated or known humidity source. Reference **Section 4.2 Set (Program) Mode** on how to program this feature.

Note: The remote (outdoor) thermo-hygrometer will always display the measured humidity level and not the calibrated humidity level. Only the console will show the calibrated value.

Note: The dew point calculation is based on the calibrated humidity level.

4.2.3 Setting Calibrated Temperature

Temperature is measured by a resistive thermal device (RTD) and is subject to electronic variation.

Temperature errors can also occur when a sensor is placed too close to a heat source (such as a building structure, the ground or trees).

To calibrate the indoor or outdoor temperature, we recommend a mercury or red spirit (fluid) thermometer. Bi-metal (dial) and other digital thermometers are not a good source and have their own margin of error. Using a local weather station in your area is also a poor source due to changes in location, timing (airport weather stations are only updated once per hour) and possible calibration errors (many official weather stations are not properly installed and calibrated).

Place the sensor in a shaded, controlled environment next to the fluid thermometer, and allow the sensor to stabilize for 24 hours. Compare this temperature to the fluid thermometer and adjust the console to match the fluid thermometer.

To calibrate indoor or outdoor temperature, in the Set Mode with indoor or outdoor temperature flashing, press the + key or **MIN/MAX** key to increase or decrease the temperature setting (in increments of 0.1 degC or 0.18 degF) to match the calibrated or known temperature source.

Reference Section 4.2 Set (Program) Mode on how to program this feature.

Note: The remote (outdoor) thermo-hygrometer will always display the measured temperature

level and not the calibrated temperature level. Only the console will show the calibrated value.

Note: The dew point calculation is based on the calibrated temperature level.

4.3 Alarm Mode

4.3.1 Alarm Display

While in Normal Mode, press the **ALARM** key to enter the High Alarm Mode. Press the **ALARM** key again to enter the Low Alarm Mode. Press the **ALARM** key again to return to normal mode (or wait 30 seconds).

Note: After entering the **ALARM** mode, the console will display the high and low alarm settings. If the value reads ----- (dashes), the alarm is not active.

4.3.2 Alarm Programming

While in Alarm Mode, press the **SET** key to set the alarms. The following are high and low alarms:

High Alarm Limits:

- Time alarm (hour/minute)
- Indoor humidity high alarm
- Indoor temperature high alarm
- Outdoor humidity high alarm
- Outdoor temperature / dew point high alarm
- Pressure high alarm

Low Alarm Limits:

- In the Low Alarm Mode press the SET key to select the following alarm modes:
- Time alarm (hour/minute)
- Indoor humidity low alarm
- Indoor temperature low alarm
- Outdoor humidity low alarm
- Outdoor temperature / dew point low alarm
- Pressure low alarm

In the alarm mode, Press the + key or **MIN/MAX** key to change or scroll the alarm value while the specific alarm is flashing.

Hold the + key or **MIN/MAX** key for 3 seconds to change the number rapidly. Press the **ALARM** key to select the alarm on or off (if alarm is enabled, the speaker icon on the LCD will be turned on indicating the alarm function has been enabled).

Press the **SET** key to confirm the setting and continue pressing the **SET** key to toggle through each alarm mode until it returns to the normal display mode.

Press the **SNOOZE** key or wait 30 seconds, and the alarm mode will return to the normal mode.

4.3.3 Cancelling the Alarm

When an alarm condition has been activated, the specific alarm will sound and flash for 120 seconds.

Press any key to cancel the alarm.

When an alarm condition is activated again within 10 minutes, the alarm will not sound but will continue to flash until the weather condition is stable. This feature is useful to avoid repeated triggering for the same alarm value.

The alarm will reset automatically once the value has fallen below the set value, or if a new value is entered.

4.3.4 Outdoor Alarm - Temperature vs. Dew Point

When the outdoor weather alarm has been triggered, it will flash on the LCD display and the general outdoor alarm icon and high/low alarm icon will flash. For example, in the outdoor temperature display mode, when dew point high alarm is triggered the **DEW POINT** icon will flash along with general outdoor alarm icon and high alarm icon, indicating that the current alarm source is from dew point.

4.4 Min/Max Mode

While in Normal Mode, press the **MIN/MAX** key to enter the maximum mode, and the **MAX** icon and maximum records will be displayed and begin flashing.

Press **MIN/MAX** key again to enter the minimum mode, and the **MIN** icon and minimum records will be displayed and begin flashing.

Press **MIN/MAX** key again to return the Normal Mode.

In the maximum reading Mode, press the $\frac{1}{2}$ key to display the maximum values with the time and date time stamp at which the maximum value occurred (the maximum value will begin flashing).

- 1. Indoor humidity maximum
- 2. Indoor temperature maximum
- 3. Outdoor humidity maximum
- 4. Outdoor temperature maximum
- 5. Pressure maximum

In the minimum reading Mode, press the **t** key to display the minimum values with the time and date time stamp at which the minimum value occurred (the minimum value will begin flashing).

- 1. Indoor humidity minimum
- 2. Indoor temperature minimum
- 3. Outdoor humidity minimum
- 4. Outdoor temperature minimum
- 5. Pressure minimum

While in the minimum or maximum mode, press the **SET** key for two seconds to reset the value (that is flashing) and associated date and time to the current reading.

Press the **SNOOZE** key or wait 30 seconds for timeout, and the Min/Max mode will return to Normal Mode.

4.5 Other Console Features

The following section describes additional console features.

4.5.1 Weather Forecasting

Note: The weather forecast or pressure tendency is based on the rate of change of barometric pressure. In general, when the pressure increases, the weather improves (sunny to partly cloudy) and when the pressure decreases, the weather degrades (cloudy to rain).

It may take several days to begin forecasting the weather. In the mean time, there may be no trend arrows and the both icons display partly cloudy.

The weather forecast is an estimation or generalization of weather changes in the next 24 to 48 hours, and varies from location to location. The tendency is simply a tool for projecting weather conditions and is never to be relied upon as an accurate method to predict the weather.

4.5.2 Weather Icons

The four weather icons are Sunny, Partly Cloudy, Cloudy and Rainy. There are also two weather tendency indicators to show the air pressure tendency between the weather icons.

4.5.3 Weather tendency indicator

The weather tendency arrow is located between the weather icons to show the air pressure tendency and provide a forecast based on increasing or decreasing air pressure.

The arrow pointing to the right indicates that the air pressure is increasing and the weather is expected to improve. The arrow pointing the left indicates that the air pressure is decreasing and the weather is expected to deteriorate.

The weather tendency is based on the pressure change since last six hours. If the weather is changing,

the weather tendency indicator (animated arrows) will flash for three hours, indicating the weather is expected to change. If the weather conditions become stable and no new weather change conditions are met, then the arrows will be fixed.

Example 1: Pressure is decreasing, weather is deteriorating.

Example 2: Pressure is increasing, weather is improving.

4.5.4 Storm threshold indicator

The storm threshold (the negative rate of pressure change signifying a storm is expected) can be adjusted by the user from level 3 to level 9 (the default level 4 mbar/hour).

When negative rate of change of pressure is exceeded for 3 hours, the storm warning indicator will be activated, and the clouds with rain icon and tendency arrows will flash for 3 hours indicating the storm warning feature has been activated.

4.5.5 Pressure threshold setting

The pressure threshold (the negative or positive rate of change of pressure signifying a change in the weather) can be adjusted by the user from level 2 to level 4 (default level 2 mbar/hour).

The lower the level pressure threshold setting, the higher sensitivity for weather forecast changes. Locations that experience frequent changes in air pressure require a higher setting compared to locations where the air pressure is typically stagnant.

4.5.6 Pressure Graph

The pressure graph displays the barometric pressure for the last 24 hours. Each bar represents three hours.

4.5.7 Moon Phase

The following moon phases are displayed based on the calendar date.

			()	\bigcirc	\bigcirc			
New	Waxing	First	Waxing	Full	Waning	Third	Waning	New
	Crescent	Quarter	Gibbous		Gibbous	Quarter		

4.5.8 Sunrise and Sunset

To determine your longitude and latitude, we recommend the following website:

www.bing.com/maps

Reference Figure 5 below:

- 1. Enter your address and select the search button
- 2. The latitude (first number) and longitude (second number) are returned. In this example:

Latitude = 33.2981181889772 Longitude = -111.960209459066

The table below defines the hemisphere based on the positive or negative sign:

Position	Positive	Negative
Latitude	Northern	Southern
Longitude	Eastern	Western

3. In this example, the location entered into the display is as follows:

Latitude = 33.30 North Longitude = 111.96 West after rounding to two significant digits.

Record your longitude and latitude here for future reference:

Longitude:

Latitude:

4.5.9 Restoring Lost Outdoor Temperature and Humidity Sensor

If the signal is lost between the remote sensor (or transmitter) and the display console (or the receiver), to resynchronize, while in normal mode, press and hold the $\frac{1}{2}$ key for 10 seconds. The transmitter search icon will appear in the outdoor temperature and humidity section. Please wait several minutes for the search icon $\frac{20}{2}$ to turn off and the remote sensor reports in. Do not touch any buttons until synchronization is complete.

4.5.10 Restoring to Factory Default

If alarms and calibration constants have been inadvertently set, or memory has been corrupted, you may want to restore the console to factory default.

To restore the console to factory default:

- 1. Remove one battery from the battery compartment. Wait 10 seconds for the console to go completely blank.
- 2. Press and hold the **[SET]** and **[MIN/MAX]** buttons at the same time and reinsert the battery. Continue to hold. The backlight will flash 12 times.
- 3. When the flashing is complete, let go of the buttons. The console has now been restored to factory default.
- 4. Wait several minutes before pressing any buttons for the remote sensor to sync to the console.

5. Glossary of Terms

Term	Definition		
Absolute Barometric	Measured barometric pressure.		
Pressure			
Accuracy	Accuracy is defined as the ability of a measurement to match the actual		
	value of the quantity being measured.		
HectoPascals (hPa)	Pressure units in SI (international system) units of measurement. Same		
	as millibars (1 hPa = 1 mbar)		
Hygrometer	A hygrometer is a device that measures relative humidity. Relative		
	humidity is a term used to describe the amount or percentage of water		
	vapor that exists in air.		
Inches of Mercury (inHg)	Pressure in Imperial units of measure.		
	1 inch of mercury = 33.86 millibars		

Range	Range is defined as the amount or extent a value can be measured.
Relative Barometric	Relative barometric pressure, corrected to sea-level. To compare
Pressure	pressure conditions from one location to another, meteorologists correct
	pressure to sea-level conditions. Because the air pressure decreases as
	you rise in altitude, the sea-level corrected pressure (the pressure your
	location would be at if located at sea-level) is generally higher than your
	measured pressure.

6. Specifications

6.1 Wireless Specifications

- Line of sight wireless transmission (in open air): 300 feet
- Frequency: 433 MHz
- Update Rate: 48 seconds

6.2 Measurement Specifications

The following table provides specifications for the measured parameters.

Measurement	Range	Accuracy	Resolution
Indoor Temperature	32 to 140 °F	±2 °F	0.1 °F
Outdoor Temperature	-40 to 149 °F	±2 °F	0.1 °F
Indoor Humidity	1 to 99 %	$\pm 5\%$	1 %
Outdoor Humidity	20 to 95%	± 5%	1 %
Barometric Pressure	8.85 to 32.50 inHg	± 0.08 inHg (within	0.01 inHg
		range of 27.13 to 32.50	
		inHg)	

6.3 Power Consumption

- Base station : 3 x AA 1.5V Alkaline batteries
- Remote sensor : 2 x AAA 1.5V Alkaline batteries
- Battery life: Minimum 12 months for base station Minimum 24 months for thermometer-hygrometer sensor (use lithium batteries in cold weather climates)

7. Troubleshooting Guide

If your question is not answered here, you can contact us as follows:

- 1. Email Support: support@ambientweather.com
- 2. Live Chat Support: www.ambientweather.com/chat.html (M-F 8am to 4pm Arizona Time)
- 3. Technical Support: 480-346-3380 (M-F 8am to 4pm Arizona Time)

9. Liability Disclaimer

Please help in the preservation of the environment and return used batteries to an authorized depot. The electrical and electronic wastes contain hazardous substances. Disposal of electronic waste in wild country and/or in unauthorized grounds strongly damages the environment.

Reading the "User manual" is highly recommended. The manufacturer and supplier cannot accept any responsibility for any incorrect readings and any consequences that occur should an inaccurate reading take place.

This product is designed for use in the home only as indication of weather conditions. This product is not to be used for medical purposes or for public information.

The specifications of this product may change without prior notice.

This product is not a toy. Keep out of the reach of children.

No part of this manual may be reproduced without written authorization of the manufacturer.

Ambient, LLC WILL NOT ASSUME LIABILITY FOR INCIDENTAL, CONSEQUENTIAL, PUNITIVE, OR OTHER SIMILAR DAMAGES ASSOCIATED WITH THE OPERATION OR MALFUNCTION OF THIS PRODUCT.

10.FCC Statement

Statement according to FCC part 15.19:

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

- 1. This device may not cause harmful interference.
- 2. This device must accept any interference received, including interference that may cause undesired operation.

Statement according to FCC part 15.21:

Modifications not expressly approved by this company could void the user's authority to operate the equipment.

Statement according to FCC part 15.105:

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable

protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

11. Warranty Information

Ambient, LLC provides a 1-year limited warranty on this product against manufacturing defects in materials and workmanship.

This limited warranty begins on the original date of purchase, is valid only on products purchased and only to the original purchaser of this product. To receive warranty service, the purchaser must contact Ambient, LLC for problem determination and service procedures.

Warranty service can only be performed by a Ambient, LLC. The original dated bill of sale must be presented upon request as proof of purchase to Ambient, LLC.

Your Ambient, LLC warranty covers all defects in material and workmanship with the following specified exceptions: (1) damage caused by accident, unreasonable use or neglect (lack of reasonable and necessary maintenance); (2) damage resulting from failure to follow instructions contained in your owner's manual; (3) damage resulting from the performance of repairs or alterations by someone other than an authorized Ambient, LLC authorized service center; (4) units used for other than home use (5) applications and uses that this product was not intended (6) the products inability to receive a signal due to any source of interference or metal obstructions and (7) extreme acts of nature, such as lightning strikes or floods.

This warranty covers only actual defects within the product itself, and does not cover the cost of installation or removal from a fixed installation, normal set-up or adjustments, claims based on misrepresentation by the seller or performance variations resulting from installation-related circumstances.
